

Chris Nelson, our Police and Crime Commissioner has secured funding to significantly subsidise VIN CHIP® system installations. This limited-time offer is only available to farms, estates and rural businesses in the Gloucestershire Constabulary area to reduce rural crime.

We have partnered with VIN CHIP® to provide an incredible opportunity to protect an asset using the latest forensic technology overtly and covertly from **ONLY £25+VAT**.

SAVING YOU up to £155+VAT, with no additional cost whilst the machine remains in your ownership. Not only is this an incredible saving but it may also reduce your insurance premiums if you are insured through NFU Mutual.

What is VIN CHIP®?

VIN CHIP® is a theft detection and forensic security system designed to reduce losses of assets from theft. Protecting your agricultural vehicles, plant, machinery and equipment with VIN CHIP® will deter criminals and support the Police to detect and recover quickly. It will reduce the personal inconvenience, disruption to your business and the cost implications resulting from theft.

It is the most innovative and advanced Radio Frequency Identification (RFID) and forensic security system, including over 4000 unique identifiers linked to the VIN of the asset making it almost impossible for a criminal to remove completely.

Each system is registered with VIN CHIP®'s secure registration database which UK police forces have 24/7 access to.

The system was introduced to combat leisure vehicle crime in 1998. It has evolved to become the leading security and recovery system for the leisure vehicle industry and since being introduced, thefts of caravans have fallen by 90%.

You can take advantage of this limited time offer by applying through:
