## Leaders in Vehicle Security Innovation

UK manufacturer supplying products that work independently or in conjunction with the vehicle security system

### Armourshell

The ArmourShell is an external, semi-automatic lock with anti-drill inserts and a hardened steel locking bolt. It is available in two sizes and bolts to the doors of the van, holding them shut with a bullet cylinder. Usually fitted in the window area, the shape of the body deflects direct hammer blows. An anti-drill piece protects the cylinder from attack, and the inter-locking rear body chamfer protects the shells from being forced apart.

Armourshell

### Auto PedalBox

A simple, effective and high-visibility deterrent that even the most determined will struggle to overcome, the PedalBox blocks access to your van's pedal controls. Crafted from high-grade steel with anti-drill manganese plates and finished with a durable, yellow powder coat, our high security lockable box can be seen easily from outside the vehicle even in low light, making sure any opportunists know not to bother.

PedalBox

### CATPro

Sometimes, you need to protect what's on your van as much as what's in it. Catalytic converters and diesel particulate filters are routinely held in place with fixings that can be removed with tools and so are often under attack from thieves. CATPro is a corrosion-resistant, vehicle-specific system that uses either a boron chain and clamp to secure the exhaust system to the chassis, or a plate system to reinforce the manufacturer's fixing points.

CATPro

### DeadLock Protect+

DeadLocks have been the go-to solution of choice over the years and with good reason – they're robust, reliable and versatile, able to fit a wide range of vehicles in any number of ways to best suit your needs. The deadlock is a secondary mortice lock, completely independent of the manufacturer's locking system. A high-security key throws a dead bolt into a specially designed keep, giving you a second layer of security to keep thieves at bay.

DeadLock

### HookLock Protect+

More strength, more protection, more control. Like the Deadlock, the HookLock puts you in control with a secondary mortice lock that works completely independently of the manufacturer's main system. Also, like the Deadlock, the Hooklock is operated by a high-security key. The key difference is that it works by throwing a hook into a specially designed keep, making it incredibly difficult to force apart.

HookLock

### Key Operated OBD Port Protector

Computers are fast becoming the most powerful tool in a thief's kit. They can use them to override your built-in immobiliser by connecting a laptop, PDA or EDI Key into the on-board diagnostics (OBD) socket and drive away undetected. The patented, lockable OBD Port Protector is a secure box covering your OBD port plug and opened either with a key or secure 4-digit PIN. A simple and non-invasive installation means this is an effective quick-fix.
